EarthCycle DIY CLUB

BELMONT, CALIFORNIA

Our club's purpose is to spread awareness on upcycling, create projects using unused materials, and build a school community conscious of our environment.

Accomplishments

- Featured on Hashtag Our Stories on Snapchat
- We now have 30+ members and a distribution system during distance learning!

Recent & Current Projects

- All of the following are upcycled: holiday cards, snow globes, pet mats (aka snuffle mats) textbook covers
- Biomimicry challenge

What we're excited about

- We're super excited to start getting more involved with our local community and donate our upcycled projects to various organizations in the Bay Area.
- We are also excited to reach new students and expand our joy for upcycling :)

Community Involvement

- Most recently, our members created snuffle mats out of old kitchen mats and fabrics and donated them to a pet shelter in Palo Alto.
- Using old jars and paper towel rolls, we made snow globes and cards and donated them to two local senior homes!

Club History & Inspiration

- We wanted to create a fun and accessible way to learn about climate change and combat it. Upcycling was a perfect option because it utilizes old items that are commonly found and is also a fun way to destress by crafting.
